GreenPave is formulated to effectively prevent AC and HMA/WMA build up while delivering economics comparable to diesel. Since diesel was outlawed, paving operations were forced into a difficult choice - either spend more money for a “green” product that may or may not work, or risk fines and spills with diesel.

GreenPave is easy to spray and mixes with water for economy. GreenPave is biodegradable and environmentally compliant. With a high flash and low fumes, nothing on the market is more friendly towards your crew.

Reduce diesel consumption, replace expensive volatile citrus products, and finally consolidate purchasing between your plant and your crew—TRY GREENPAVE TODAY!
