

Key to maintaining a clean well lubricated slat?

The right product and application system make all the difference

Easy to install and maintain, BG's spray bars clamp to the outside of the system and are easily removed for access to the slats. Operation is a snap, with control valves running spray bars and guns efficiently and safely.

BG Chemical engineers our Drag Slat Spray System to provide an efficient and effective spray down. Maximizing performance and safety, the system is designed to work with our proven asphalt release agents, **Black Magic** and **GreenPave**.

Either product can replace diesel, or other cleaning solvents; eliminating any flash danger in the slat - while outperforming the lubricity of diesel.

BG's Spray System can be custom configured to match the exact needs of your plant. Our goal is to provide vital lubrication and cleaning as safely and economically as possible, while minimizing the time and effort required.

Give us a call; and a chance to increase plant safety and save you time and money.

Basic System: 1 Pump Box, 2 Spray Bars, 1 Spray Gun, 100' 1/2" hose, and appropriate fittings
