

Earn Your Bonus. Reduce Wear.

MTVs and Shuttle Buggies are becoming a necessary component of the paving train for companies to maximize bonuses for smoothness, timeliness and density. Being dedicated to the paving industry, one of the most common problems we encounter are maintenance issues with MTVs/shuttle buggies and an effective means for release agent application. Disruptions in the paving process can cost contractors thousands of dollars by the minute.

In response to marginal or overpriced existing options, BG Chemical would like to introduce our SBS System. We've captured a rugged, reliable product designed for the tough conditions of asphalt paving at an affordable price. The SBS System is user-friendly and operated by an on-board, push button function providing application as needed without stopping the machine.

Don't take our word for it, see what our customers have to say:

“We have been very pleased with the system, especially, when we are laying hot mix over seal coat projects in Texas. We had a lot of trouble with the wheels picking up the seal coat when temperatures reached the mid 90's and 100's. With the system installed, we have not seen that happening. This provides us with the results we were looking for, and in turn, gives us the quality project that we are trying to achieve. “ - Dave Kosse, Duinick Brothers
